---

★ **17:00 - 17:30** | *Questions and discussion*

---

\*Note that the time is CET - [check timezone here](#)

| [RSVP](#) | [Join WNN](#) |

## **Jo Browning**

*Media and Scientific Communications Specialist*

*Founder of Scientifically and Filshie Browning Associates*

Jo Browning is a specialist in science and media communications, with extensive experience helping those working in science and healthcare to communicate with impact and authority. Jo trained as a journalist at BAFTA and Emmy award-winning Insight News Television and then moved into public relations. She has held several senior positions in science and healthcare communications across Europe. She holds an English degree from Oxford University, a Diploma in Public Relations, and a Post Graduate Diploma in Science and Society. She lectures on science and corporate communications and is an in-demand speaker and trainer. Jo is the Founder of communications and training companies *Filshie Browning Associates* and *Scientifically*. Her book, *Scientifically Speaking: How to speak about your research with confidence and clarity* is an Amazon bestseller.

## **Daniel Quintana**

*Senior Researcher, University of Oslo*

*Science communicator and podcaster*

Dan Quintana is a Senior Researcher in Psychology at the University of Oslo. His research investigates how hormones influence our thoughts and behaviours, the neurobiology of autism spectrum disorders, and research methodology. Along with his research, Dan is also a science communicator, using various social media platforms and podcasts to share scientific research and discuss the scientific research process. His science podcast *Everything Hertz* has been downloaded over half a million times and his YouTube channel has received over 200,000 views. Daniel has also authored a short book, *Twitter for Scientists*, on how academics can use Twitter to boost their careers (t4scientists.com).

---

**Women's NeuroNetwork (WNN)** was established by Dr Ann-Marie de Lange and Dr Claudia Barth to provide a networking platform for researchers at all career stages. The aim is to promote academic independence and support collaboration across labs and countries. All neuroscientists who identify as a woman are welcome to join our community. Please find more information and an overview of all members here: [www.womensneuronet.com](http://www.womensneuronet.com).
